

PIONEER OF HYDRAULIC PERFORMANCE

Founded in 1958 in the heart of Baden-Württemberg, Hydropneu has developed into a leading manufacturer of hydraulic cylinders and hydraulic power systems. With decades of engineering expertise and a strong commitment to innovation, the company delivers high-performance solutions for a wide range of industries worldwide. Today, as part of the HPS International Group, Hydropneu stands for precision, reliability and comprehensive hydraulic competence — from individual components to complete electro-hydraulic systems.

SPECIAL MACHINE CYLINDERS

Customized hydraulic cylinders for special machine construction, based on proven standard designs and adapted to specific application requirements.

Options include individual fixation, integrated valve blocks, damping systems and displacement measurement technology for precise and cost-efficient solutions.

HEAVY DUTY CYLINDERS

Tailor-made hydraulic cylinders developed for extreme operating conditions and high-load applications.

Featuring integrated cooling systems and advanced high-temperature sealing concepts to ensure durability and performance in harsh industrial environments.

PAPER INDUSTRY CYLINDERS

Application-specific hydraulic cylinders developed for demanding paper production environments.

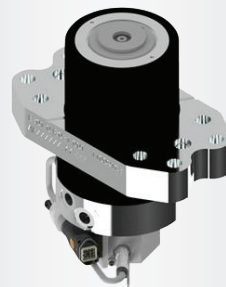

Equipped with nickel-plated components, stainless steel piston rods, protective bellows and optimized sealing concepts to ensure corrosion resistance and long service life.

MOBILE & RAILWAY CYLINDERS

Individually engineered hydraulic solutions for demanding mobile and railway applications.

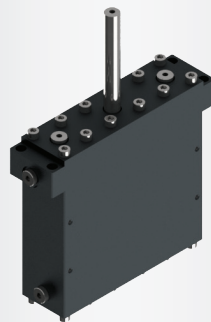

Manufactured with hardened components, C5 corrosion protection, position sensors and full serial traceability for safety-critical environments.

CUSTOM MULTI-ROD CYLINDERS

Fully engineered customer-specific cylinder solutions, including complex multi-piston-rod configurations.

Designed with individual bodies and precision-finished components to guarantee maximum stability, accuracy and operational reliability.

INTEGRATED HYDRAULIC SYSTEMS

Hydraulic cylinders combined with integrated power units for compact and efficient machine solutions.

Available as single- or double-acting systems with optional linear sensors and customized electrical interfaces.
